REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The applicant's arguments are found persuasive. It is seen that regarding the prior art to Floyd et al., there is no teaching or suggestion that the injection means for the oxygen-containing gas enter through the bottom of the reactor. Additionally, it is held by the applicant that the essential characteristics of the injection means, in order for it to prevent a plug of glass from forming upon cessation of oxygen-containing gas flow, are 1) the means are disposed vertically through the bottom (of the bottom plate) of the reactor and 2) the means are provided with an opening disposed 90° to the vertical axis. See specification, page 7, lines 18-22. The claims, which require this injection means, are thus limited as such.

Regarding the prior art to Shaw et al., the reference teaches the use of a molten metal batch and the use of a shroud gas, or gaseous cooling fluid. Applicants have pointed out that the use of a liquid cooling fluid in place of the gaseous cooling fluid of Shaw et al. would not be obvious, due to the effect of the molten metal on the cooling liquid. It is thus noted that the amended claims thus require a molten glass bath and a cooling liquid.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
